Goat Rescued from Sinkhole Inspires GLOBE Student Research in Ohio

Following the discovery of a goat that had fallen into one of the numerous sinkholes in their community, GLOBE students in Adams County, Ohio, studied the geology and soil science of the Ohio Valley where sinkholes can cause severe geologic hazard and significantly damage or destroy

Become a GLOBE Teacher

Science educators and citizen scientists around the world become involved with GLOBE by attending a Teacher Training Workshop where they receive professional development on the implementation of GLOBE pedagogical models for inquiry-based research and the use of GLOBE protocols to answer scientific research questions. Once teachers have attended a GLOBE training event or completed GLOBE E-Teacher certification, they are provided with the knowledge and tools to implement GLOBE Protocols and learning activities in a classroom setting, work with their students to make data observations, and report these observations to the GLOBE website via an assigned Sign In identification. Training workshops are listed [online](#).

Create a GLOBE Teacher Account

Request to become a GLOBE Teacher by creating an account.

Filling out the form below gives you access to register for a Teacher Training Workshop.

Once trained, your GLOBE Teacher account will allow you to report data to the database and post to discussion boards with teachers just like you around the world. Prior to training, you have access to all the resources within the GLOBE website.

Create your account now to start your students' path of exploration, discovery and investigation of the Earth.

Overview

Elementary GLOBE is designed to introduce K-4 students to the study of Earth System Science. The complete instructional unit includes:

- Science-based storybooks designed to introduce students to key concepts in [water](#), [soil](#), [clouds](#), [seasons](#) and [Earth system](#) studies.
- Classroom learning activities complementing the science content covered in each storybook that are designed to further engage students in GLOBE's 5 investigation areas.

GLOBE makes every effort to provide translations of our materials in the 6 official U.N. languages (Arabic, Chinese, English, French, Russian, and Spanish). Currently, Arabic, English, French, German, and Spanish translations of Elementary GLOBE books and teacher's guide are available on the web site. If you would like to assist us in adding your language to this list please contact us at elementaryglobe@globe.gov.

"Simon, your role is to represent water," said Ms. Patel. "Please tell us about why water is an important part of the Earth system."

"OK. I am water, and nothing on Earth can live without me," Simon stated, as he walked to the center of the stage. "I fall from the sky as rain and help plants grow. Animals drink me. I help break down materials to make soil. I form clouds and help keep the Earth cool. Besides being rain, I am also snow, hail, and sleet, and I can be found in oceans, lakes, rivers, and other waterways. When I freeze, I become ice."

"Simón, tu representas al agua", dijo la señorita Patel. "Por favor, dínos por qué el agua es la parte importante del sistema de la Tierra".

"OK. Yo soy el agua y nada en la Tierra puede vivir sin mi existencia", dijo Simón, a medida que caminaba hacia el centro del escenario. "Calgo del cielo en forma de lluvia y ayudo a las plantas a crecer. Los animales me beben. Ayudo a separar los materiales que forman los suelos. Doy origen a las nubes y ayudo a refrescar a la Tierra. Además de ser lluvia, también soy nieve, granizo y aguanieve; me encuentro en los océanos, lagos, ríos y otras fuentes marinas. Cuando me congelo me convierto en hielo".

Earth System in a Bottle Recipe Card

Earth System in a Bottle Recipe

Each group will make two terrariums. All groups will make a terrarium that has all of the parts of the Earth's systems. Then each group will make a second terrarium that is missing one part of the Earth's systems.

Earth System in a Bottle

1. Put about **three cups of soil** in the bottom section of the terrarium and pat the soil gently until it is fairly firm.

2. Add about a **quarter cup of water** and look at the soil from the side to make sure that all of the soil gets wet. If there's still dry soil, add more water.

3. Drop **4-5 radish seeds** onto the surface of the soil. Use your fingertip to push the seeds just below the soil surface. Sprinkle a little more soil on top of the seeds just to cover them.

4. Place the top section of the terrarium on top, pushing alternate flaps to the inside and outside so that it fits securely. Make sure the lip/top is still on the bottle.

I've circled the part of the Earth system that it belongs to below.

It connects these parts of the Earth system.
Draw arrows \longleftrightarrow to show the connections!

GLOBE Teacher Training Workshops

Connect your students to an international network of students, teachers and scientists, learning more about our shared environment. For a school to fully participate in the GLOBE Program, at least one teacher must be trained in the GLOBE science measurement protocols and education activities by attending a GLOBE Teacher Workshop.

Click on the links below for more information about a GLOBE Workshop in your area – or contact your local GLOBE Partner.

**Introduction to GLOBE**

The "Introduction to GLOBE" module provides an overview of The GLOBE Program and how various roles, such as teachers and scientists, are involved in the program.

**Introduction to GLOBE for Scientists**

The "Introduction to GLOBE for Scientists" module provides an overview of The GLOBE Program and how scientists are involved in the program.

**Introduction to the Atmosphere Investigation**

The "Introduction to the Atmosphere Investigation" module introduces the GLOBE Atmosphere Investigation, including fundamental science content and classroom resources available to support you in guiding your students through investigating the atmosphere.

**Clouds**

The "Clouds" module provides details about GLOBE's Cloud Protocols, including tools and tips for cloud identification, fundamental science content and classroom resources to support you in guiding your students through cloud observation.

Welcome to the Web Tutorial section of the GLOBE website. The resources on these pages are here to help you understand and work with the various parts of the GLOBE website.

The GLOBE website is made up of several specialized areas that allow you to engage, collaborate, educate, as well as enter and interact with scientific data. Each area is listed on the right. Click on an item to see a video and/or download step by step guides. Tutorials cover the main areas of the site including:

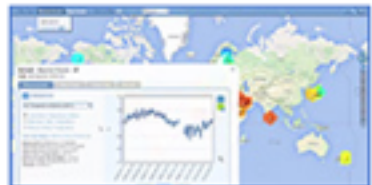

- The main GLOBE website, which allows you to engage in the GLOBE Program, collaborate, and access training, and educational resources.
- The Data Entry System, which allows you to enter Scientific Data that Schools organizations have collected.
- The Visualization and Data Retrieval System which provides tools for interacting, with and retrieving scientific data that has been entered by trained community members that belong to school organizations.

Here are some additional quick links to useful documents:
